INTERNATIONAL PATENT CLASS- G02F001167; G09F00937

APPLICANT(S)- RICOH CO LTD

PUBLICATION COUNTRY- Japan

PROBLEM TO BE SOLVED: To allow dispersed particle in a dispersion medium to retain its stable dispersed state over a long period of time by using fine particles with a pigment component on the surface and voids in the interior as the dispersed particles in a display fluid consisting of the dispersed particles and the dispersion medium different from the dispersed particles in color tone.

SOLUTION: In a display fluid consisting of dispersed particles and a dispersion medium different from the dispersed particles in color tone, fine particles with a pigment component on the surface and voids in the interior are used as the dispersed particles. A colored or white inorganic pigment may be used as the pigment component. In order to ensure the internal voids, hollow polymer particles 1 are used and the surfaces of the hollow polymer particles 1 are coated with the pigment component 2 or the pigment component 2 is made porous or hollow.
